

Who are we

The Royal Astronomical Society of Canada Charlottetown Centre is a group of people interested in Astronomy, from teens to seniors. We meet regularly to share the fun of learning about the stars, planets and all the wonders of the universe.

We share our knowledge willingly, to help the public to become more aware of the universe above by outreach, observing, meetings and many other activities.

Mountains and craters on the Moon

Our Meetings

Monthly meetings are informative and fun, and take place at UPEI, in the KC Irving Chemistry Building lecture theatre, at 7pm, on the third Sunday of each month (excluding Dec, July and August).

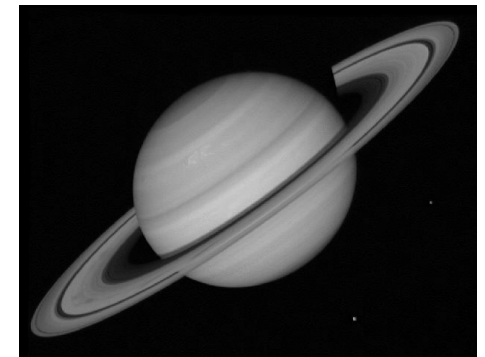

The meetings are open to everyone and all are welcome!

Our Activities

- * We get together frequently throughout the year in a dark location to view the wonders of the night sky. Members who own telescopes share them freely. All are welcome!
- * We host Astronomy Day events each spring.
- * We host public viewing nights each summer at Greenwich and Stanhope in the PEI National Park.
- * We co-host a scheduled monthly public viewing event at the UPEI observatory (consult our web page for scheduled dates and times). All are welcome!
